### Research Summary

Scaffolding is a temporary structure erected at a construction site to support workers and materials during the building, repair, or maintenance of structures such as buildings, bridges, and towers. Typically constructed from steel or aluminum tubes and boards, scaffolding provides a safe and stable platform for workers to access elevated areas, perform tasks, and transport materials. It consists of various components, including vertical standards, horizontal ledgers, diagonal braces, and platforms or decks, assembled in a modular fashion to adapt to different heights and configurations. Scaffolding systems may also incorporate additional safety features such as guardrails, toe boards, and access ladders to minimize the risk of falls and accidents. Scaffolding plays a crucial role in construction projects by facilitating efficient and secure access to elevated work areas, ensuring worker safety, and supporting the timely completion of tasks.

The major global manufacturers of Scaffolding include Layher, BRAND, Safway, PERI, ULMA, Altrad, MJ-Gerst, Waco Kwikform, KHK Scaffolding, Instant Upright, Entrepouse
