### Research Summary

Scleral lenses are specialized contact lenses that cover a larger portion of the eye's surface, including the sclera (the white outer layer of the eye), as opposed to traditional corneal lenses. These lenses are typically larger in diameter, designed to vault over the cornea and rest on the sclera, creating a fluid-filled reservoir between the lens and the cornea. This design provides several advantages, including improved comfort, stability, and vision correction for individuals with irregular corneas, such as those with keratoconus, corneal ectasia, or severe dry eye syndrome. Scleral lenses also offer better oxygen permeability, allowing for longer wear times without discomfort, and can provide relief for individuals intolerant to traditional contact lenses. Additionally, scleral lenses are used in specialty applications such as managing ocular surface diseases, post-surgical corneas, and cases of extreme refractive error, making them valuable tools in modern optometry and ophthalmology practices.

The major global manufacturers of Scleral Lens include ABB Optical, Bausch Health, Visionary Optics, Essilor, Art Optical, CooperVision, BostonSight, Tru-Form Optics, AccuLens, Advanced Vision Technologies, Capricornia, Valley Contax, Menicon, etc.
