Research Summary

An SCR (Silicon Controlled Rectifier) power regulator is an electronic device used to control the amount of power delivered to a load in an electrical circuit. It works by regulating the conduction angle of one or more SCRs, which are semiconductor devices capable of controlling large amounts of electrical power. By varying the firing angle of the SCR, the regulator can adjust the amount of power supplied to the load, allowing for precise control of temperature, speed, or other parameters in industrial applications. SCR power regulators are commonly used in heating elements, such as in industrial furnaces, ovens, and electric heaters, where accurate temperature control is critical. They offer advantages such as high reliability, fast response times, and high efficiency, making them suitable for various applications requiring precise power control.

The major global manufacturers of SCR Power Regulator include Advanced Energy, Watlow, Sichuan Injet Electric, Taiwan Pan-globe Instrument Control, Sansha Electric Manufacturing, SHIMADEN, Beijing Fuanshi Technology, TAISEE, Winling Technology, WATT, CD Automation, RKC Instrument, Toptawa, SIPIN TECHNOLOGY, Control
