Research Summary

Scraped surface heat exchangers are specialized heat transfer devices used in industries such as food processing, pharmaceuticals, and chemicals for heating, cooling, crystallization, and mixing of viscous or heat-sensitive products. These heat exchangers consist of a cylindrical shell containing a rotating shaft with scraper blades or pins attached. The scraper blades continuously scrape the product off the heat transfer surface as the shaft rotates, promoting efficient heat transfer by ensuring uniform contact between the product and the heat exchange surface. Scraped surface heat exchangers are particularly suitable for processing highly viscous materials, such as creams, gels, pastes, and sauces, as well as products prone to fouling or scaling, thanks to their ability to prevent buildup and maintain thermal efficiency. They offer advantages such as high heat transfer rates, precise temperature control, minimal product degradation, and easy maintenance, making them indispensable tools in thermal processing operations requiring gentle treatment of sensitive products.

The major global manufacturers of Scraped Surface Heat Exchangers include Alfa

Laval, SPX Flow, Buhler Group, ProXES(Terlet), Kelstream, HRS Heat Exchangers, Armstrong Chemtec, RONO Maschinenbau, MBS, Zhaoqing CANGREEN, API Heat Transfer, etc. The global players competition landscape in this report is divided into three tiers.
