Research Summary

A scroll chiller is a type of refrigeration system commonly used for air conditioning and industrial cooling applications. It operates using one or more scroll compressors, which use a spiral-shaped mechanism to compress refrigerant gas. The chiller system circulates a refrigerant through a closed loop, absorbing heat from a process or space and transferring it to a heat exchanger where it is dissipated, usually to the atmosphere or to a water loop. Scroll chillers are known for their high efficiency, quiet operation, and reliability, making them popular choices for various cooling needs in commercial buildings, data centers, manufacturing facilities, and other large-scale applications.
