Research Summary

Scroll compressors are a type of positive displacement compressor widely used in refrigeration and air conditioning systems. They operate by using two interleaving spiral-shaped scrolls, typically made of metal, where one scroll remains stationary while the other orbits around it. This movement creates a series of expanding and contracting pockets that draw in, compress, and discharge the refrigerant gas. Scroll compressors offer several advantages over traditional reciprocating compressors, including higher efficiency, quieter operation, fewer moving parts, and reduced vibration. They are commonly found in residential and commercial air conditioning units, refrigeration systems, heat pumps, and other cooling applications, providing reliable and energy-efficient compression of refrigerant gases.

The major global manufacturers of Scroll Compressors include Emerson, Aotecar, Panasonic, Daikin, Hitachi, Samsung, Mitsubishi Electric, LG, Air Squared, Danfoss, Bitzer, Atlas Copco, Tecumseh, BOGE, Airpol, ANEST IWATA, RENNER Kompressoren, Sanden, Chunlan, Invotech Scroll Technologies, etc. The global players
