Research Summary

A scrubber system, also known as a gas scrubber or air scrubber, is an environmental control device used to remove pollutants and contaminants from industrial exhaust gases or process streams. It typically consists of a vessel or tower packed with a medium such as water, chemical solutions, or specialized materials, through which the contaminated gas is passed. As the gas flows through the scrubber, the pollutants are absorbed or chemically reacted with the scrubbing medium, effectively removing them from the gas stream. Scrubber systems are employed in a wide range of industries, including chemical processing, power generation, manufacturing, and wastewater treatment, to mitigate air pollution and comply with regulatory emission standards. They play a crucial role in reducing harmful emissions such as sulfur dioxide, nitrogen oxides, particulate matter, volatile organic compounds, and hazardous gases, contributing to improved air quality and environmental protection.

The major global manufacturers of Scrubber System include Babcock & Wilcox Enterprises, Alfa Laval, DuPont, FUJI ELECTRIC, GEA Group, Wartsila, Hamon,
