Research Summary

Sealing glass, also known as glass sealing, is a process used in manufacturing where glass is utilized to create hermetic seals between two or more materials, typically metals or ceramics. This process involves heating the glass to its softening point and then bonding it to the other materials, forming a tight and durable seal that prevents the ingress or egress of gases or liquids. Sealing glass is commonly employed in a wide range of applications, including electronics packaging, semiconductor manufacturing, automotive sensors, and medical devices, where a reliable and inert sealing material is required to ensure the integrity and performance of sensitive components or systems.

The major global manufacturers of Sealing Glass include Schott, Elan Technology, AGC, Nippon Electric Glass, Johnson Matthey, Fusite (Emerson), Corning, 3M, Mo-Sci, Shenzhen SAM, etc. The global players competition landscape in this report is divided into three tiers.
