### Research Summary

Seamless copper tubes are cylindrical conduits made from solid copper without any welded joints or seams along their length. Produced through a process called extrusion or drawing, where solid copper billets are forced through a die to form a tube shape, seamless copper tubes offer superior strength, durability, and corrosion resistance compared to their seamed counterparts. Their seamless construction ensures uniformity in thickness and structural integrity, making them ideal for applications where leak-tightness and reliability are paramount, such as in plumbing, HVAC (Heating, Ventilation, and Air Conditioning) systems, refrigeration, and heat exchangers. Seamless copper tubes are valued for their excellent thermal conductivity, facilitating efficient heat transfer, and are available in various sizes and configurations to suit diverse industrial and commercial needs.

The major global manufacturers of Seamless Copper Tubes include Mueller, Wieland, GD Copper, Cerro, Freeport-McMoRan, ST Products, Cambridge-Lee Industries, National Copper, H&H Tube, JMF Company, etc. The global players competition
