Research Summary

Sec-butanol, also known as 2-butanol or secondary butanol, is a four-carbon alcohol compound with the chemical formula $C_4H_{10}O$. It is classified as a secondary alcohol due to the hydroxyl (-OH) group attached to the second carbon atom in the chain. Sec-butanol is a colorless liquid with a strong alcoholic odor and is miscible with water and many organic solvents. It is primarily used as a solvent in various industries, including coatings, paints, varnishes, and pharmaceuticals. Additionally, sec-butanol serves as a precursor in the production of chemicals such as butyl acetate, butylamines, and plasticizers. Its favorable solvent properties, low toxicity, and relatively low cost make it a valuable ingredient in numerous industrial processes.

The major global manufacturers of Sec-Butanol include ExxonMobil Chemical, ZiBo Haizheng Chemical, Xinjiang Dushanzi TianLi High & New Tech, Zhejiang Xinhua Chemical, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier

includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
