Research Summary

Security screening systems are specialized technologies and equipment designed to detect and identify potential threats, contraband, and prohibited items during the screening process. These systems encompass a variety of devices, including X-ray scanners, metal detectors, millimeter-wave scanners, explosive trace detection (ETD) devices, and body scanners, each tailored to detect specific types of threats. X-ray scanners utilize penetrating radiation to create images of the contents of baggage, parcels, and cargo, allowing security personnel to identify suspicious objects. Metal detectors detect metallic objects carried by individuals, while millimeter-wave scanners use electromagnetic waves to create a detailed image of a person's body to identify concealed items. ETD devices analyze swabs taken from surfaces to detect trace amounts of explosives or narcotics. Security screening systems are employed in airports, seaports, government buildings, event venues, and other high-security areas to enhance security measures and prevent potential threats from entering secure environments, ultimately ensuring public safety and maintaining national security standards.

The major global suppliers of Security Screening Systems include Leidos, Nuctech, OSI Systems, Smiths Detection, Safeway, CEIA, Astrophysics, GARRETT, Analogic, IWILDT, Lornet, Westminster, Security Centres International, Adani, Research Electronics International, Suritel, etc. The global players competition landscape in this report is divided into three tiers.
