Research Summary

A self-ballasted fluorescent lamp is a type of fluorescent lamp that integrates its own ballast within the lamp itself, eliminating the need for an external ballast. This design allows the lamp to be directly screwed into a standard incandescent light socket, making it convenient and easy to install without requiring additional hardware. The ballast is integrated into the lamp's base and is responsible for regulating the flow of electricity to the lamp's electrodes, ensuring proper operation and stable light output. Self-ballasted fluorescent lamps are available in various shapes and sizes, including spiral and compact designs, and they are commonly used as energy-efficient alternatives to traditional incandescent bulbs in residential, commercial, and industrial lighting applications. They offer benefits such as higher energy efficiency, longer lifespan, and improved color rendering compared to incandescent bulbs, making them popular choices for general lighting purposes.

The major global manufacturers of Self Ballasted Fluorescent Lamp include Signify, Osram, Foshan Electrical, Panasonic, Havells, Acuity Brands, Technical Consumer
