Research Summary

A self-driving robot, also known as an autonomous robot, is a robotic system equipped with sensors, cameras, and artificial intelligence algorithms that enable it to navigate and perform tasks without human intervention. These robots use a combination of sensor data, environmental mapping, and decision-making algorithms to perceive their surroundings, identify obstacles, plan paths, and execute tasks autonomously. Self-driving robots have diverse applications across various industries, including manufacturing, logistics, agriculture, healthcare, and service industries. They can perform tasks such as material handling, inventory management, surveillance, cleaning, delivery, and customer service, offering increased efficiency, accuracy, and flexibility in operations.
