Research Summary

A Self-Propelled Modular Transporter (SPMT) is a specialized vehicle used for transporting heavy and oversized loads in various industries such as construction, shipbuilding, and oil and gas. The SPMT consists of individual self-propelled modular units with hydraulic suspension and steering systems, allowing for precise control and maneuverability. These units can be connected and configured in different combinations to accommodate loads of various shapes, sizes, and weights. SPMTs are typically used for transporting large and heavy equipment, machinery, and structures within industrial facilities or over long distances on public roads. With their ability to distribute weight evenly and navigate challenging terrain, SPMTs offer a reliable and efficient solution for transporting oversized cargo while minimizing the need for dismantling or assembly at the destination.
