Research Summary

A semiconductor chip handler, also known as a chip transfer tool or chip handler, is a specialized robotic device used in semiconductor manufacturing facilities to transport semiconductor chips between various stages of the production process. These handlers are equipped with precision grippers or vacuum arms that can safely pick up, position, and transfer semiconductor chips with high accuracy and repeatability. Semiconductor chip handlers play a critical role in automating the handling and processing of semiconductor chips, ensuring efficient production workflows and minimizing the risk of damage or contamination. They are commonly integrated into semiconductor manufacturing equipment such as wafer sorters, test handlers, and packaging machines, where they facilitate the seamless transfer of chips during testing, sorting, inspection, and packaging operations. Semiconductor chip handlers contribute to increased productivity, reduced labor costs, and improved product quality in semiconductor fabrication facilities.
