### Research Summary

A semiconductor foundry, also known as a semiconductor fabrication facility or fab, is a specialized manufacturing facility that provides semiconductor manufacturing services to companies that design and develop semiconductor devices but do not own their own production facilities. Semiconductor foundries offer a wide range of fabrication processes, equipment, and expertise to produce integrated circuits (ICs) and other semiconductor devices based on customer designs or specifications. These foundries typically provide services such as wafer fabrication, packaging, testing, and sometimes even design services. Semiconductor foundries play a crucial role in the semiconductor industry ecosystem by enabling companies to bring their semiconductor designs to market without the substantial investment required to build and operate their own manufacturing facilities, thereby fostering innovation and competition in the industry.

The major global suppliers of Semiconductor Foundry include TSMC, Samsung Foundry, UMC, GlobalFoundries, SMIC, PSMC, Hua Hong Semiconductor, VIS, Tower Semiconductor, HLMC, WIN Semiconductors, Dongbu HiTek, X-FAB Silicon Foundries,

SkyWater Technology, etc. The global players competition landscape in this report is divided into three tiers.
