Research Summary

A semiconductor photoresist stripper is a chemical solution or formulation used in semiconductor manufacturing processes to remove photoresist materials from silicon wafers after photolithography steps. Photoresist is a light-sensitive material applied onto the wafer surface to define patterns for subsequent etching or deposition processes. Once the desired patterns are transferred, the remaining photoresist must be removed to reveal the underlying layers. Semiconductor photoresist strippers typically consist of organic solvents, surfactants, and additives designed to dissolve and lift off the photoresist without damaging the underlying materials or structures on the wafer. This step is critical in semiconductor fabrication as it prepares the wafer for subsequent processing steps, ensuring the integrity and functionality of the final semiconductor devices.

The major global manufacturers of Semiconductor Photoresist Stripper include DuPont, Entegris, Merck, Fujifilm, Mitsubishi Gas Chemical, Tokyo Ohka Kogyo, Kanto

Chemical, Avantor, Solexir, Technic, Anji Microelectronics, etc. The global players competition landscape in this report is divided into three tiers.
