Research Summary

A semiconductor test probe card is a crucial interface device used in the wafer testing phase of semiconductor manufacturing to establish temporary electrical connections between a tester and the individual circuits on a semiconductor wafer. It contains an array of microscopic probes or needles precisely aligned to contact each die's test pads, allowing for the verification of electrical performance and functionality before the wafer is diced into individual chips. Designed for high accuracy, reliability, and durability, probe cards are essential for identifying defective dies early in the production process, thereby improving yield and reducing costs.
