Research Summary

Semiconductor wafer tape, also known as wafer dicing tape or die attach tape, is a specialized adhesive tape used in the semiconductor manufacturing process. This tape is designed to temporarily attach semiconductor wafers to a support substrate during various fabrication steps, such as dicing, grinding, and packaging. Semiconductor wafer tape typically consists of a thin, flexible backing material, such as polyimide or polyester film, coated with a pressure-sensitive adhesive on one side. The adhesive is engineered to provide strong adhesion to the wafer while allowing for easy release without damaging the wafer or leaving residue. This enables precise and clean separation of individual semiconductor devices (chips) from the wafer after processing. Semiconductor wafer tape plays a crucial role in ensuring the accuracy, efficiency, and quality of semiconductor manufacturing processes, particularly in the production of integrated circuits and microchips.

The major global manufacturers of Semiconductor Wafer Tape include Mitsui Chemicals, LINTEC, Denka, Nitto, 3M, The Furukawa Electric, Sekisui Chemical,
