Research Summary

Serial EEPROM (Electrically Erasable Programmable Read-Only Memory) is a type of non-volatile memory commonly used in electronic devices for storing small amounts of data that need to be retained even when power is removed. Serial EEPROMs are characterized by their serial interface, which allows for easy integration with microcontrollers and other digital circuits. They are typically organized as arrays of memory cells that can be individually addressed and programmed. Serial EEPROMs offer advantages such as low power consumption, high reliability, and ease of use, making them ideal for applications requiring small amounts of non-volatile storage, such as storing configuration settings, calibration data, or firmware updates in various electronic devices, including consumer electronics, automotive systems, industrial equipment, and IoT devices.

The major global manufacturers of Serial EEPROM include STMicroelectronics, Microchip Technology, Juchen Semiconductor, ON Semiconductor, Apricot co. Ltd., Faimao Electronics, ROHM Semiconductor, Shanghai Fudan, Renesas Electronics,

Adesto, etc. The global players competition landscape in this report is divided into three tiers.
