Research Summary

A server liquid cold plate is a crucial component in high-performance server cooling systems, designed to efficiently dissipate heat from critical components like processors, memory, and GPUs. The cold plate is typically made of highly conductive materials such as copper or aluminum and is placed in direct contact with the heat-generating components. Liquid coolant flows through channels inside the cold plate, absorbing heat and transferring it away from the server's components. This process helps maintain optimal operating temperatures, preventing overheating and ensuring system stability during intense computational tasks. Liquid cold plates are commonly used in data centers and high-performance computing environments where traditional air cooling methods are insufficient for managing the heat output of modern servers.

The major global manufacturers of Server Liquid Cold Plate include AVC, Auras, Shenzhen Cotran New Material, Shenzhen FRD, Cooler Master, CoolIT Systems, Nidec, Forcecon, Boyd, KENMEC, etc. The global players competition landscape in this report is divided into three tiers.
