### Research Summary

Sesame meal is a byproduct obtained from sesame seeds after oil extraction, consisting of the crushed and ground remnants of the seeds. This meal retains the residual protein, fiber, and nutrients present in the seeds, making it a valuable ingredient in animal feed and fertilizer production. It is often used as a protein-rich supplement in livestock feed, particularly for poultry and ruminants, due to its relatively high protein content and amino acid profile. Sesame meal can also be incorporated into soil amendments and organic fertilizers to enrich soil with organic matter and improve nutrient content, promoting plant growth and soil health.
