### Research Summary

Sewer cameras, also known as sewer inspection cameras or drain cameras, are specialized devices used for visual inspection of underground sewer and drainage systems. These cameras consist of a waterproof camera head attached to a flexible cable, which is inserted into sewer pipes or drains. The camera head captures high-resolution images or video footage of the interior of the pipes, allowing inspectors to assess the condition of the sewer system, identify blockages, leaks, or structural damage, and locate the precise location of problems. Sewer cameras are equipped with powerful LED lights to illuminate dark environments and often feature pan-and-tilt capabilities to navigate around bends and corners in the pipes. The captured footage is transmitted to a monitor or mobile device in real-time, enabling inspectors to make informed decisions and plan appropriate maintenance or repair actions to ensure the proper functioning of the sewer infrastructure.

The major global manufacturers of Sewer Cameras include Rothenberger, Ridgid Tools (Emerson), CUES (ELXSI), Hokuryo, Spartan Tool, Rausch, Pearpoint
