### Research Summary

Sheet Molding Compound (SMC) is a composite material used in the manufacturing of lightweight and high-strength components for various applications. It consists of a mixture of thermosetting resins, such as polyester or epoxy, reinforced with chopped glass fibers and fillers, all blended into a thick paste-like consistency. This mixture is then compression molded into flat sheets or panels under high pressure and temperature to create rigid and durable composite sheets. SMC offers several advantages, including excellent mechanical properties, corrosion resistance, dimensional stability, and the ability to produce complex shapes with fine surface finishes. It finds extensive use in automotive, aerospace, electrical, and construction industries for manufacturing components such as vehicle body panels, electrical enclosures, appliance housings, and structural parts. Additionally, SMC's versatility and ease of processing make it a popular choice for mass production and lightweighting initiatives, contributing to enhanced performance and efficiency in various applications.

The major global manufacturers of Sheet Molding Compound (SMC) include IDI
