Research Summary

Shipping container floors are the durable flooring structures inside intermodal containers, designed to withstand heavy loads and harsh environmental conditions during transport and storage. Typically made from marine-grade plywood, bamboo, or steel, these floors provide a strong, stable surface for securing cargo. Many container floors are reinforced with steel cross members to enhance structural integrity and durability. To resist moisture, pests, and chemical exposure, the wood is often treated with protective coatings or sealants. In modern sustainable designs, eco-friendly materials such as recycled plastic composites are also used. Shipping container floors play a crucial role in maintaining cargo safety, supporting heavy machinery, and enabling the repurposing of containers into modular buildings or storage units.
