### Research Summary

Short fiber thermoplastic (SFT) is a type of composite material composed of a thermoplastic polymer matrix reinforced with short fibers. These fibers, typically ranging from a few millimeters to a few centimeters in length, are randomly dispersed within the polymer matrix to enhance mechanical properties such as strength, stiffness, and impact resistance. Unlike long fiber thermoplastics, where fibers are typically aligned, short fiber thermoplastics have fibers distributed randomly, resulting in isotropic properties. SFT materials are manufactured using processes such as injection molding, compression molding, or extrusion, making them suitable for a wide range of applications in industries such as automotive, aerospace, consumer goods, and construction, where lightweight, durable, and cost-effective materials are required.

The major global manufacturers of Short Fiber Thermoplastic (SFT) include BASF, DuPont, SABIC, Avient, DSM, Solvay, Lanxess, Hanwha Azdel, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant

industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
