Research Summary

Shotcrete machines, also known as concrete spraying machines, are specialized construction equipment used to apply shotcrete—a mixture of concrete or mortar—to surfaces in construction projects. These machines typically consist of a concrete pump, a spraying nozzle, and a control system. Shotcrete machines can be either dry-mix or wet-mix systems. In dry-mix shotcrete machines, dry ingredients such as cement, sand, and aggregates are mixed with water at the nozzle before being sprayed onto the surface. Wet-mix shotcrete machines, on the other hand, pre-mix the concrete or mortar with water before pumping it through the hose and nozzle for application. Shotcrete machines are widely used in various construction applications, including tunneling, mining, slope stabilization, swimming pool construction, and repair work, due to their efficiency, versatility, and ability to apply concrete in challenging conditions such as confined spaces or steep slopes. They offer benefits such as reduced labor costs, faster construction times, and improved quality and durability of the sprayed concrete.

The major global manufacturers of Shotcrete Machines include SANY(Putzmeister),

Aliva, Normet, Epiroc, Zoomlion(CIFA), WUXIN, CRCHI, Gengli Machinery, Titan Makina, Changsha Keda, XuGong, Furukawa, MacLean Engineering, etc. The global players competition landscape in this report is divided into three tiers.
