Research Summary

A shut-off valve is a type of valve used to control the flow of fluid or gas in a piping system by either allowing or stopping the flow completely. These valves are designed to be manually operated and are typically installed at strategic points along pipelines, plumbing systems, or equipment where flow control is necessary. Shut-off valves come in various types, including ball valves, gate valves, butterfly valves, and globe valves, each offering different characteristics and suitability for specific applications. When the valve is in the open position, fluid or gas can flow freely through the system, while in the closed position, the valve blocks the flow completely, effectively stopping the passage of fluid or gas. Shut-off valves are essential components in industries such as water supply, HVAC systems, oil and gas, and chemical processing, where precise flow control and emergency shut-off capabilities are critical for safety, efficiency, and system integrity.

The major global manufacturers of Shut-off Valve include Schneider Electric, Johnson Control, IMI, Honeywell, AVK, KITZ, Bray, TALIS, SIEMENS, Oventrop, Danfoss, BELIMO, TOMOE, YUANDA VALVE, BVMC, DunAn Valves, Shandong Yidu Valve,
