Research Summary

A shuttleless loom, also known as a modern or non-shuttle loom, is a weaving machine used in textile manufacturing to produce woven fabrics without the need for a traditional shuttle mechanism. Unlike traditional shuttle looms, which use a shuttle to carry the weft yarn back and forth across the warp yarns, shuttleless looms employ various mechanisms such as rapier, air jet, water jet, or projectile technology to insert the weft yarn into the shed created by the warp yarns. This results in faster weaving speeds, higher productivity, and reduced noise compared to shuttle looms. Shuttleless looms are widely used in textile mills for producing a wide range of fabrics, including cotton, polyester, nylon, and blends, and they offer versatility in fabric design and construction. Additionally, shuttleless looms are often equipped with advanced features such as computerized controls, automatic tension adjustments, and electronic monitoring systems, further enhancing their efficiency and performance in modern textile production processes.

The major global manufacturers of Shuttleless Loom include Picanol, Itema Group,

Tsudakoma, Dornier, Toyota, RIFA, Jingwei Textile Machinery, Haijia Machinery, Huasense, Yiinchuen Machine, SMIT, Tongda Group, Huayi Machinery, SPR, etc. The global players competition landscape in this report is divided into three tiers.
