### Research Summary

SiC coated graphite refers to a composite material comprising graphite as the base material and a layer of silicon carbide (SiC) deposited or coated onto its surface. This coating process involves various methods such as chemical vapor deposition (CVD) or physical vapor deposition (PVD), resulting in a uniform and dense layer of SiC on the graphite substrate. SiC coated graphite exhibits enhanced mechanical, thermal, and chemical properties compared to pure graphite, making it suitable for a wide range of high-temperature applications. The SiC layer provides improved oxidation resistance, thermal conductivity, and wear resistance, while the underlying graphite substrate maintains its lightweight and machinability. This composite material finds applications in industries such as aerospace, semiconductor manufacturing, and energy production, where its unique combination of properties offers superior performance in harsh operating environments.

The major global manufacturers of SiC Coated Graphite include Toyo Tanso, Sgl Carbon, Tokai Carbon, Bay Carbon, Mersen, CoorsTek, etc. The global players
