Research Summary

SiC (Silicon Carbide) diodes are semiconductor devices made from silicon carbide, a wide-bandgap material that offers superior electrical properties compared to traditional silicon-based diodes. SiC diodes are designed to handle high-voltage, high-current, and high-temperature conditions, making them ideal for demanding applications such as power electronics, electric vehicles, renewable energy systems, and industrial motor drives. Due to their wide bandgap, SiC diodes exhibit lower switching losses, higher efficiency, and faster switching speeds compared to conventional silicon diodes, allowing for more compact and energy-efficient designs. They also offer better thermal conductivity and greater reliability under extreme operating conditions, which makes them particularly well-suited for power conversion systems that require long-term durability and high performance. SiC diodes are an essential component in advancing the efficiency and performance of power systems in a variety of high-tech industries.

The major global manufacturers of SiC Diodes include STMicroelectronics, Infineon, Wolfspeed, Rohm, onsemi, Microchip (Microsemi), Fuji Electric, Navitas (GeneSiC), Toshiba, Qorvo (UnitedSiC), San'an Optoelectronics, Littelfuse (IXYS), CETC 55, WeEn
