Research Summary

A signal jammer is an electronic device designed to disrupt or block wireless communications by emitting radio frequency signals on the same frequency bands used by the targeted communication devices, such as cell phones, GPS systems, Wi-Fi networks, or radio transmitters. By broadcasting interference signals, signal jammers prevent nearby devices from sending or receiving data, effectively creating a "dead zone" where wireless communication is disrupted. Signal jammers are commonly used in military, law enforcement, and security applications to prevent unauthorized communication or remote detonation of explosives. However, their use is highly regulated and restricted in many jurisdictions due to their potential to interfere with legitimate communication networks and public safety services.

The major global manufacturers of Signal Jammer include Raytheon, L3Harris Technologies, Northrop Grumman, BAE Systems, Avnon HLS Group (SKYLOCK), Mctech Technology, Phantom Technologies, Stratign, RF-Technologies, Digital RF, Endoacustica Europe S.R.L, HSS Development, etc. The global players competition
