Research Summary

Silica antiblock additives are fine particles of silica incorporated into polymer films, coatings, or plastics to prevent adhesion between layers and surfaces. These additives function by creating a microscopic roughness on the surface of the material, reducing the contact area between adjacent layers and minimizing the likelihood of blocking or sticking during processing, handling, or storage. Silica antiblock additives are particularly useful in applications where films or coatings come into contact with each other, such as in packaging films, agricultural films, or adhesive tapes. By improving slip properties and enhancing the overall performance and handling characteristics of the material, silica antiblock additives contribute to smoother production processes and higher product quality in various industries.

The major global manufacturers of Silica Antiblock Additives include Evonik, WR Grace, PQ Corporation, Madhu Silica, Solvay, Fuji Silysia, IQE Group, Tosoh Silica, Baerlocher, S-Chemtech, Imerys, Hoffmann Mineral, EP Mineral, etc. The global players competition landscape in this report is divided into three tiers.
