Research Summary

Silicate coatings, also known as silicate mineral coatings or potassium silicate coatings, are inorganic coatings formed by the reaction of water glass (sodium silicate or potassium silicate) with a mineral substrate such as concrete, masonry, or stone. These coatings penetrate into the pores of the substrate and chemically react with the free lime present in the material, forming a durable and chemically bonded layer of calcium silicate hydrate (CSH) gel. Silicate coatings are valued for their excellent adhesion, breathability, and resistance to weathering, UV radiation, and chemical attack. They provide a protective and decorative finish for a variety of architectural surfaces while allowing moisture vapor to escape, preventing issues such as efflorescence and moisture-related damage. Silicate coatings are commonly used in historic preservation, restoration of concrete structures, and as environmentally friendly alternatives to traditional organic coatings due to their non-toxic nature and long-lasting performance.

The major global manufacturers of Silicate Coatings include KEIM Mineral Paints, PPG Industries, Nippon Paint, AkzoNobel, Teknos Group, Jotun, Remmers, KREIDEZEIT,

Chin Hin Group Berhad, BEECK Mineral Paints, Gber, Nature et Harmonie, Silacote USA LLC, Tonaso Coatings, Earthborn Paints, etc. The global players competition landscape in this report is divided into three tiers.
