### Research Summary

Silicates for concrete floor treatment refer to chemical solutions containing alkali metal silicates, typically sodium or potassium silicates, used to densify and harden concrete surfaces. When applied to concrete floors, silicate solutions penetrate into the capillary pores of the substrate and react with calcium hydroxide (lime) present in the concrete to form calcium silicate hydrate (CSH) gel. This gel fills in the voids within the concrete matrix, resulting in increased density, surface hardness, and abrasion resistance. Silicate treatments also help to reduce dusting, improve chemical resistance, and enhance the overall durability of concrete floors. Additionally, silicate treatments may offer benefits such as reduced porosity and increased resistance to water penetration and oil stains, making them popular choices for industrial, commercial, and residential concrete flooring applications.

The major global manufacturers of Silicates for Concrete Floor Treatment include PQ Corporation, VanBaerle, Silmaco, Noble Alchem, Kiran Global Chem, Sterling
