Research Summary

Silicon Carbide (SiC) ceramic membranes are advanced filtration membranes fabricated from silicon carbide, a durable and chemically resistant material known for its excellent thermal stability, mechanical strength, and corrosion resistance. These membranes feature a porous structure with precise pore sizes, typically ranging from nanometers to micrometers, allowing for efficient filtration of liquids and gases. Silicon Carbide ceramic membranes find applications in various industries such as water treatment, wastewater treatment, chemical processing, and pharmaceutical manufacturing, where they provide high filtration efficiency, long service life, and resistance to harsh operating conditions. Their exceptional performance in removing contaminants, pathogens, and impurities from fluids while maintaining high flux rates and low fouling propensity makes them essential components in ensuring water quality, process efficiency, and product purity across diverse industrial applications.
