Research Summary

Silicon steel grade magnesium oxide, also known as MgO, is a crucial component used in the production of electrical steel, specifically in grain-oriented electrical steel (GOES) manufacturing. This grade of magnesium oxide serves as an insulating layer between the steel substrate and the electrical winding in transformers and other electrical devices. Its high purity and consistent properties ensure optimal electrical insulation and mechanical strength, preventing electrical losses and enhancing the efficiency of electrical equipment. Magnesium oxide acts as a protective barrier, inhibiting the formation of eddy currents and minimizing energy loss through hysteresis. This material plays a vital role in enhancing the magnetic properties and electrical performance of grain-oriented electrical steel, making it indispensable in the production of high-efficiency transformers and electrical machinery crucial for power distribution and utilization.

The major global manufacturers of Silicon Steel Grade Magnesium Oxide include
