Research Summary

Siliconized film refers to a type of plastic film that has been coated with a layer of silicone on one or both sides. This silicone coating imparts various properties to the film, such as improved release, moisture resistance, and heat resistance. Siliconized films are commonly used in packaging applications where a non-stick surface is required, such as in the production of adhesive tapes, labels, release liners, and food packaging. The silicone coating allows for easy release of adhesive materials or other products without leaving residue, enhancing manufacturing efficiency and product quality. Additionally, siliconized films provide barrier properties against moisture, oxygen, and other environmental factors, preserving the freshness and integrity of packaged goods. With their versatility, durability, and ability to withstand a wide range of temperatures and conditions, siliconized films are essential materials in various industries, including packaging, electronics, medical, and automotive.

The major global manufacturers of Siliconized Film include Loparex, Polyplex, Siliconature, Avery Dennison, UPM Raflatac, Mondi, Laufenberg GmbH, Infiana, Nan
