Research Summary

Silver chloride is a chemical compound composed of silver and chlorine, with the chemical formula AgCl . It is a white crystalline solid that is insoluble in water and most solvents but slightly soluble in ammonia and concentrated solutions of certain halide salts. Silver chloride occurs naturally as the mineral chlorargyrite, but it can also be synthesized through various chemical reactions. It is primarily used in photography, where it is sensitive to light and serves as a component of photographic emulsions, particularly in black-and-white photography. When exposed to light, silver chloride undergoes a chemical reaction that forms metallic silver, resulting in the production of photographic images. Additionally, silver chloride has applications in the manufacturing of electrodes, as an antimicrobial agent in certain medical and cosmetic products, and in analytical chemistry as a reagent for detecting chloride ions.

The major global manufacturers of Silver Chloride include American Elements, Metalor Technologies, D.F. Goldsmith, Crystran Ltd, ProChem, Inc., Maitry Enterprise, Starline Chemical, Silver Shine Chemicals, SD Fine-Chem, Micron Platers, etc. The global
