Research Summary

Silver sintering die attach paste is a specialized material used in semiconductor packaging for bonding semiconductor chips to substrates or lead frames. It consists of silver particles suspended in a polymer or solvent-based binder. Silver sintering paste offers several advantages over traditional solder-based die attach materials, including higher thermal conductivity, better reliability at high temperatures, and reduced risk of thermal cycling failures. During the die attach process, the paste is dispensed onto the substrate, and the semiconductor chip is then placed on top. The assembly is heated to a specific temperature, causing the solvent to evaporate and the silver particles to sinter, or bond, to both the chip and the substrate. This creates a strong, electrically conductive bond between the chip and the substrate, facilitating efficient heat dissipation and electrical performance. Silver sintering die attach paste is commonly used in high-power and high-temperature applications, such as automotive electronics, power modules, and LED devices, where thermal management and reliability are critical.

The major global manufacturers of Silver Sintering Die Attach Paste include Heraeus, Kyocera, Indium, Alpha Assembly Solutions, Henkel, Namics, Advanced Joining Technology, Shenzhen Facemoore Technology, Beijing Nanotop Electronic Technology, TANAKA Precious Metals, Nihon Superior, Nihon Handa, NBE Tech, Solderwell Advanced Materials, Guangzhou Xianyi Electronic Technology, ShareX (Zhejiang) New Material Technology, Bando Chemical Industries, etc. The global players competition landscape in this report is divided into three tiers.
