Research Summary

Silyl modified polymers (SMPs) for construction are innovative adhesive and sealant materials engineered to provide superior bonding and sealing properties in building and infrastructure applications. These hybrid polymers combine the advantages of organic polymers with the functionality of silane groups, allowing them to adhere to a wide range of substrates including concrete, metals, glass, and wood. SMPs are moisture-cured, forming durable and elastic bonds that resist weathering, UV radiation, and temperature fluctuations commonly encountered in construction environments. They offer excellent adhesion, flexibility, and elongation properties, making them suitable for sealing joints, bonding construction materials, and waterproofing structures such as facades, roofs, and windows. SMP-based sealants and adhesives contribute to the longevity and integrity of buildings by providing reliable protection against water ingress, air leakage, and environmental degradation, thus ensuring the sustainability and performance of construction projects over their lifespan.

The major global manufacturers of Silyl Modified Polymer (SMP) for Construction include Sika, Kaneka, Arkema (Bostik), Wacker, Evonik, 3M, Dow, H.B.
