Research Summary

A single-cell dispenser is a specialized laboratory instrument used to dispense small volumes of liquid, typically at the microliter or nanoliter scale, into individual cells or compartments. These dispensers are commonly used in various biological and biomedical research applications, particularly in single-cell analysis techniques such as single-cell RNA sequencing, single-cell genomics, and single-cell proteomics. Single-cell dispensers enable precise and accurate delivery of reagents, samples, or media to individual cells or microfluidic devices, facilitating high-throughput analysis of single cells with minimal sample consumption and contamination. They often incorporate features such as adjustable dispensing volumes, precise control of flow rates, and compatibility with microplate formats to accommodate diverse experimental requirements and sample types. Single-cell dispensers are essential tools for advancing our understanding of cellular heterogeneity, gene expression, and cell-to-cell interactions in complex biological systems.

The major global manufacturers of Single-Cell Dispenser include BICO, Bio-Rad
