### Research Summary

Single cell protein (SCP) products are food or feed ingredients derived from microbial biomass cultivated using various microorganisms such as bacteria, yeast, or algae. These microorganisms are grown on renewable and sustainable substrates like agricultural residues, waste streams, or industrial by-products, in controlled fermentation processes. The resulting biomass is rich in proteins, essential amino acids, vitamins, minerals, and other nutrients, making it a valuable source of nutrition for human consumption or animal feed. SCP products offer numerous advantages, including high protein content, efficient resource utilization, reduced environmental impact, and independence from traditional protein sources like livestock farming. They have potential applications in addressing global food security challenges, supporting sustainable agriculture, and diversifying protein sources in diets for humans and animals.

The major global suppliers of Single Cell Protein Products include Lesaffre, AB Mauri, Angel Yeast, Lallemand, Pakmaya, Tangshan Top Bio Technology, Unibio International,
