### Research Summary

Single-mode lasers are a type of laser that emits light in a single, well-defined optical mode or path. Unlike multimode lasers, which emit light in multiple modes or paths simultaneously, single-mode lasers produce a highly focused, coherent beam with minimal divergence. This characteristic makes them ideal for applications requiring precise control over beam quality, such as telecommunications, fiber optic communication systems, interferometry, and high-resolution imaging. Single-mode lasers typically use a laser cavity design that supports only one optical mode, ensuring that only one specific wavelength of light oscillates within the laser cavity. This results in a narrow linewidth and a highly stable output, making single-mode lasers essential components in various scientific, industrial, and medical applications where precision and reliability are paramount.

The major global manufacturers of Single mode Lasers include Azur Light Systems, JPT Opto-electronics, LASIT, LUMENTUM, Maxphotonics, Newport Corporation, NKT Photonics, Nufern, Omicron Laserprodukte, Optec, Quantel-Laser, RGBLase, Rofin

Laser Micro, Sacher Lasertechnik, TOPTICA Photonics, Z-LASER Optoelektronik GmbH, Jiangxi Liansheng Technology, etc. The global players competition landscape in this report is divided into three tiers.
