Research Summary

Single-use batch chromatography systems are disposable chromatography systems designed for the purification of biomolecules such as proteins, peptides, nucleic acids, and vaccines in biopharmaceutical manufacturing. These systems typically consist of pre-packed columns, disposable flow paths, and integrated pumps, sensors, and control systems. Unlike traditional chromatography systems, which require cleaning, sterilization, and validation between batches, single-use batch chromatography systems are used once and then discarded, eliminating the risk of cross-contamination and reducing downtime associated with cleaning and setup. They offer advantages such as flexibility, scalability, and ease of use, allowing biopharmaceutical manufacturers to quickly and efficiently purify biomolecules at various scales while minimizing capital investment, operational costs, and time-to-market. Single-use batch chromatography systems are increasingly adopted in biopharmaceutical production processes to meet the growing demand for flexible and cost-effective manufacturing solutions.

The major global manufacturers of Single-Use Batch Chromatography Systems include Danaher (Cytiva & Pall), Sartorius, Thermo Fisher Scientific, Merck, Repligen, TruKing Ingenuity, Jiangsu Hanbon Science & Technology, Sepragen, Lisure Science, Tofflon Science And Technology Group, Zhejiang JYSS Bio-Engineering, Agilitech, etc. The global players competition landscape in this report is divided into three tiers.
