### Research Summary

A single-use video endoscope is a disposable medical device used for diagnostic and therapeutic procedures, particularly in minimally invasive surgeries, gastroenterology, urology, and pulmonology. These endoscopes feature a miniature camera and light source at the tip, allowing clinicians to visualize internal organs, tissues, and cavities in high-definition video images. Unlike traditional reusable endoscopes, which require extensive cleaning, disinfection, and sterilization processes between uses, single-use video endoscopes are designed for one-time use and are discarded after each procedure, reducing the risk of cross-contamination and infections. They offer the same level of performance and image quality as reusable endoscopes but provide added convenience, efficiency, and safety for healthcare providers and patients. Single-use video endoscopes are increasingly adopted in healthcare settings due to their cost-effectiveness, ease of use, and ability to improve infection control practices while maintaining high standards of patient care.
