Research Summary

Sintering paste is a specialized material composed of metal particles—commonly silver, copper, or other conductive metals—suspended in a binding agent, designed for use in high-temperature sintering processes to create strong, electrically and thermally conductive bonds between components. When heated during manufacturing, the metal particles fuse together without melting the entire material, forming a solid, robust connection that is ideal for electronic packaging, power devices, and semiconductor applications. Sintering paste offers advantages such as low void formation, high thermal conductivity, and improved mechanical strength, making it a key material in advanced electronics where reliability and heat management are critical.

The major global manufacturers of Sintering Paste include Heraeus Electronics, Kyocera, Indium, MacDermid Alpha, Henkel, Namics, Advanced Joining Technology, Shenzhen Facemoore Technology, TANAKA Precious Metals, Nihon Superior, Nihon Handa, NBE Tech, Sumitomo Bakelite, Celanese, Solderwell Advanced Materials, Guangzhou Xianyi Electronic Technology, ShareX (Zhejiang) New Material Technology,

Bando Chemical Industries, Shenzhen Jufeng Solder, Mitsuboshi Belting, Ningbo Nayu Semiconductor, Chongqing Pingchuang, QLsemi Technology, Ample Electronic Technology, etc. The global players competition landscape in this report is divided into three tiers.
