Research Summary

Skidding systems are specialized mechanical setups used to move heavy loads horizontally across a surface with precision and control, often in environments where cranes or rollers are impractical. These systems typically consist of hydraulic push-pull units, skid tracks, and load supports, allowing for safe and efficient transport of large equipment such as transformers, industrial machinery, or structural components. By minimizing friction and distributing weight evenly, skidding systems enable the relocation of massive objects in tight or sensitive spaces, such as factories, shipyards, or construction sites.

The major global suppliers of Skidding Systems include Mammoet, Fagioli, Palfinger, Enerpac, Holmatro, Sarens, Imenco, Jiangsu Canete Machinery Manufacturing, HIMEN, Hydra-Slide, Dorman Long, IQIP, Bardex, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier

includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale.
