Research Summary

Slag wool, also known as mineral wool or rock wool, is an insulating material manufactured from molten slag, a byproduct of steel production, or natural rock such as basalt or diabase. The raw materials are melted at high temperatures, spun into fibers, and compressed into dense mats or batts. Slag wool insulation exhibits excellent thermal insulation properties, providing resistance to heat transfer and helping to maintain comfortable indoor temperatures while reducing energy consumption. It also offers sound absorption capabilities, contributing to acoustic comfort by dampening noise transmission between spaces. Slag wool insulation is commonly used in residential, commercial, and industrial buildings for insulating walls, ceilings, floors, and roofs, as well as in HVAC systems, appliances, and industrial equipment where thermal and acoustic insulation are required. Additionally, slag wool is non-combustible, resistant to mold, mildew, and pests, making it a safe and durable insulation solution for various construction applications.

The major global manufacturers of Slag Wool include USG, Paroc, Hebei Huaneng Zhongtian, Changyi Jiayuan Jiancai, Hejian 100 keda Chemical, Shanghai Boda
