### Research Summary

SLAM (Simultaneous Localization and Mapping) robots are autonomous robotic systems equipped with sensors and algorithms that enable them to navigate, map, and localize themselves within unknown or dynamic environments in real-time. These robots integrate various sensors such as cameras, LIDAR (Light Detection and Ranging), IMU (Inertial Measurement Unit), and odometry sensors to perceive their surroundings and gather spatial information. By continuously analyzing sensor data and correlating it with a map of the environment, SLAM robots can simultaneously estimate their own position (localization) and construct a map of the environment (mapping) as they move through it. SLAM technology is widely used in robotics applications such as autonomous vehicles, drones, mobile robots, and industrial automation, enabling these systems to operate effectively in diverse and changing environments without the need for pre-existing maps or external navigation aids.

The major global manufacturers of SLAM Robots include Clearpath Robotics, Swisslog, Mobile Industrial Robots, Vecna, SMP Robotics, Omron Adept, Hi-Tech Robotic

Systemz, Aethon, Amazon Robotics, Fetch Robotics, etc. The global players competition landscape in this report is divided into three tiers.
